

aessra

The Allergy & Environmental Sensitivity Support & Research Association

- Fragrance Free Product List -

This is a list of most of the unscented & fragrance free products that are available in Australia.

Some of these products may be suitable to be used around or by people who are sensitive to chemicals, have allergies or MCS. It is always best to check with a person who is sensitive to chemicals before wearing a product around them.

Just because a product says on the label that it is fragrance free or unscented does not mean that it does not contain any fragrance. Some products contain fragrance chemicals that are used as a masking agent to cover the unpleasant odour of some of the other ingredients.

Always read the label carefully & contact the manufacturer for more information. Especially be careful if the ingredients are not on the label at all.

Many members of AESSRA are very sensitive to scents, even those that are natural. Products that contain any essential oils or any other natural ingredient or extract that has a scent have an *asterisk next to the brand name.

Just because a product is okay for one person with allergies or chemical sensitivities does not mean it will be okay for somebody else. AESSRA recommends for people to test any new product before use.
