

Researching Engineers and Engineering Online

...a guide to resources

The 2009 Engineering Heritage Victoria Guest Speakers Series

Thursday, 18 June 2009
5:30pm for 6:00pm to 7:00pm

John Connell Auditorium,
Engineering House, 21 Bedford Street North Melbourne

Engineering Heritage, Victoria would like to invite you to a special presentation.

Archives, Libraries and Museums are continuing to make available an ever expanding range of indexes and digitised documents on-line through the Web.

Not only is this making it easier to research engineers and their works, at anytime from anywhere, but it is also enabling searches across material that is not indexed, thus providing exciting new opportunities for research.

This is particularly relevant for researching engineers working in early Australia, who often moved from colony to colony, from civil engineering to surveying to drawing and back again, then perhaps moved to New Zealand, the Americas, Asia or Europe.

This presentation will describe and guide researchers through some of the current key local, national, and international on-line resources, illustrated with some interesting engineering related research examples..

About the Guest Speaker:

Ken McInnes is a civil engineer with a strong background in environmental engineering, town planning, information and computer systems, and capital works management. He is currently working as an Adjunct Teaching Fellow at Swinburne University of Technology, lecturing future innovators in Internet and Web Technologies. Ken has had a long standing interest in Engineering Heritage. He was a founder of Engineering Heritage Victoria; the chair for many years; a member and National Chair of Engineering Heritage Australia; was on the state Heritage Council; and chaired the National Trust Timber Bridges Committee.

Continuing Professional Development (CPD) may be claimed for attendance at this event if relevant

Registration is NOT required for attendance at this event.
