

Care of Courts.

During the current level of water restrictions, revised conditions apply for the watering of our two entoutcas courts (5 & 6).

The automated watering sprinkler system has been turned off, however, both courts maybe watered by hand at any time. Based on the condition of the court, it is recommended that they be watered as appropriate before play, between sets and at the completion of play. Watering is essential particularly during summer months and on windy days. When watering please ensure the **hose nozzle is held "UP"** to avoid court damage. During the cooler and damper winter months the courts should generally need minimal if any watering.

Please note, all Courts are for tennis ONLY. Please do not allow children to play any other games on them.

Finally, last player to leave courts must ensure that all gates are closed and locked.
